Steamed foods not only retain their vitamins and minerals but are uniquely tender and flavorful. Now prepare them with a minimum of effort in our restaurant-quality three-quart steamer. It features a lift-out colander with swivel handles that can't drop down inside and thus disappear amongst the zucchini. Ideal not only for cooking fresh and frozen vegetables and seafood but for warming rice and tortillas and rolls. Heavy-gauge stainless steel.

WHAT'S TAMPAX GOT...THE OTHERS HAVE NOT?

TAMPAX PROTECTION. IT'S SUCH A COMFORT.

TAMPAX'S BETTER COMBINATION OF PROTECTION AND COMFORT

The Tampax® tampon goes beyond ordinary protection... protection with comfort. A better combination protection and comfort than the next brand.

Why does Tampax protect so well?

Because only Tampax contours to your body three ways...moves and softly expands with your body, like it was made for you alone. So easy to remove, too. And that's comfortable protection.

No wonder more women trust Tampax than all the other tampons combined. Why not trust yourself to Tampax next time?

TAMPAX is the registered trademark of TAMPAX Incorporated, Palmer, Mass. 01069

GOOD HOUSEKEEPING

Nov. 1977 GOOD HOUSEKEEPING PAGE 252

Elizabeth's last letter again and there, among the disconnected sentences, it was: *Please pray for me, Jani.*

Strange words, for Elizabeth. She, who never asked for help, who believed in action, not prayer.

Carefully I took out my worn Bible, knelt beside the bed and began to turn the pages slowly. *Please pray for me, Jani.*

I said my prayer and then I read the Twenty-Third Psalm, but when I got to my feet I stumbled and dropped the Bible. The back endpaper separated from the binding, and I stared down at what seemed to be several sheets of folded, thin paper.

My mouth was dry, and my hands were trembling as I carefully removed the papers and began to read what I recognized as Sembur's handwriting.

"Dear Jani,

"Today you were seven years old and I have decided to write down your story. It is only right to do so in case something happens to me.

"Your father was Captain Francis Saxon, of the First Battalion, 2nd Queen Victoria's Own Gurkha Rifles. He was sent to the State of Jahanpur, with the rank of Colonel, to command the Maharaja's armed forces, three companies of infantry and one battery of artillery. It was to do with politics, but I won't go into all that.

"I was the only British R.S.M. in any Gurkha regiment, which was something special, and I was nearly due to retire, so when your father asked if I would sign on for seven years as R.S.M. of the Jahanpur Army I was very pleased. He was the best man I ever knew.

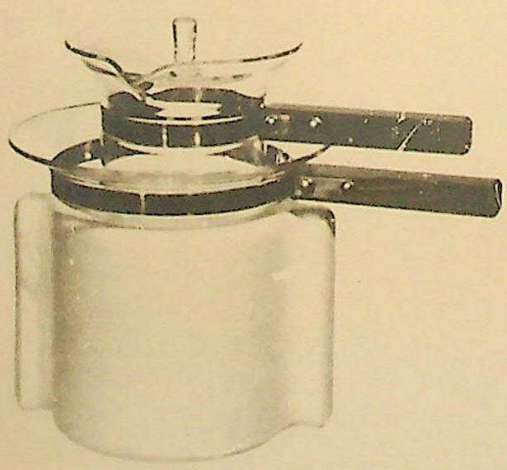
with professional education, will be interested in the Yale plan because it suggests the creation of a truly professional engineer, one who is educated rather than merely trained. Yale's new engineer will be grounded in the humanities and sciences "because it is much easier for the scientist to convert himself into an engineer than for the trained engineer to master the new science required for a dynamic technology." The professions of medicine and law have for a long time based their curricula on similar premises.

ID honored

INDUSTRIAL DESIGN was awarded a certificate of merit for editorial excellence, in *Industrial Marketing's* 23rd annual editorial competition. The award, for "outstanding improvement in design," was presented in New York on November 30.

Chemist's soup kitchen

The indefatigable Dr. Peter Schlumbohm, inventor of the Chemex coffeemaker, has often turned his attention to solving problems most people never knew they had. Most recently he has developed the



Schlumbohm's "Soupette"

"Soupette" (above), a double boiler designed to facilitate and enhance the preparation of concentrated canned soup.

The can of soup is poured into the inner boiler, and an equal amount of water poured into the outer boiler. The boiling water heats the concentrate to 180 degrees in about 12 minutes, and is then added to it, resulting in a soup that comes to the table at 180 degrees and stays hot, protected by a Dylite "Tempot." The Tempot is equally useful for retaining the temperature of chilled soup. Dr. Schlumbohm recommends the new 7-ounces for zabaglione and hot chocolate, as well as for soup.

Alcoa competition

The Aluminum Company of America's industrial design department is now collecting material on "product design incorporating imaginative and effective use of aluminum," and placed on the market since January, 1961. Material chosen will, after clearance with contestants, be used in Alcoa advertising programs. Entries and recommendations should be sent by March 17 to R. D. Parks, 1501 Alcoa Building, Pittsburgh 19, Pa.

National Hotel Exposition

An estimated 57,000 persons, representing owners and managers of what are described as "mass housing and feeding operations," saw a record 848 displays by 651 exhibitors at the 46th annual National Hotel Exposition in New York's Coliseum, November 6 through 9. Among the featured exhibits were: the "Room of Tomorrow" (above), designed by Emily Malino, presenting new ideas in hotel-motel guest room decor; "Designs for Dining" by Ellen McCluskey, including five dining rooms and one cocktail lounge; and a "Kitchen Modernization Clinic" exhibit, designed by Arthur W. Dana, demonstrating how to buy kitchen equipment economically and use it efficiently. Also included in the exposition were conferences such as the Fourth Annual Motel-Motor Hotel Conference and a Wine Sales Workshop. The Exposition was sponsored by the New York State Hotel Association, Inc. and the Hotel Association of New York City, Inc.

New York World's Fair

The New York fair has decided to rent exhibition space at the Seattle fair, for a scale-model display to be built by Display, Inc. in association with Richard C. Gunthridge.

Speaking to New York's West Side Association of Commerce, fair president Robert Moses called the critics of the fair "rash," "petty," "superficial" everything but "legion," which they are.

DIRECTION DE LA PROPRIÉTÉ INDUSTRIELLE.

BREVET D'INVENTION.

Gr. 20. — Cl. 4. N° 837.721

Article de ménage composé, en particulier pour le camping.

M. Eugène LAGARDE résidant en France (Seine).

Demandé le 9 mai 1938, à 11h 36m, à Paris.
Délivré le 18 novembre 1938. — Publié le 20 février 1939.

La présente invention est relative à un article de ménage composé, en particulier pour le camping.

Le but de l'invention est la réalisation d'un dispositif d'encombrement très réduit et d'un prix de revient peu élevé constituant un ensemble permettant de remplacer différents articles de cuisine et de vaisselle, tels que gamelles, plats, assiettes, poêles, etc.

Le dispositif suivant l'invention est essentiellement caractérisé en ce que le corps de l'article de ménage composé, établi sous forme de gamelle en toute matière appropriée présente : un fond dont la section transversale est étudiée pour recevoir, avec un encombrement minimum, un ou plusieurs plats ou assiettes de section correspondante s'emboîtant les uns dans les autres; et, un rebord à la partie supérieure pour recevoir, soit l'un des plats ou assiettes pour la formation d'un compartiment supplémentaire à la gamelle, soit un couvercle qui peut également assurer l'étanchéité directement sur le compartiment supplémentaire. Le couvercle ou l'un des plats comporte un passant permettant l'usage d'une poignée appropriée formant queue de poêle à frire ou à fricasser. Le corps principal ou gamelle est prévu avec des passants servant au passage de la courroie destinée à maintenir les différents articles sous la forme d'un « ensemble marchand » ou à recevoir une poignée en fil métallique, en forme d'U allongé dont les branches peuvent pour l'introduction dans l'un des passants être rapprochées l'une de l'autre par déformation élastique.

D'autres avantages et caractéristiques de l'invention ressortiront de la description qui va suivre en regard du dessin annexé qui représente, schématiquement et simplement à titre d'exemple une forme de réalisation de l'invention.

Sur ce dessin :

La fig. 1 est une vue de l'ensemble marchand composé;

La fig. 2 montre les différents ustensiles séparés les uns des autres.

L'article de ménage composé comporte un corps principal formant gamelle 1 dont le fond 2 présente, en coupe transversale, une section correspondante à celle des plats ou assiettes 3 s'emboîtant, sans aucune perte de place, soit contre le fond 2, soit les unes dans les autres. La partie supérieure de la gamelle 1 et la forme des plats ou assiettes 3 sont d'une forme telle qu'un plat peut être posé de manière étanche sur le haut de la gamelle, tandis qu'un couvercle 4 est prévu pour assurer la fermeture étanche en étant appliqué directement sur le haut de la gamelle ou sur le plat; cette disposition permet de créer dans la

HOUSE FURNISHINGS . . . REVIEW OF JANUARY SHOWS I

Courtesy Foley Mfg. Co.

Raw Food Mincer

This mincer chops, grinds or grates all raw foods including onions, meat, bread, parsley and vegetables of all kinds. Manufacturers claim that it is easier to clean than grinders or choppers. May be taken apart. Foley Mfg. Co., 11 Main St., N.E., Minneapolis, Minn.

Hammered Cast Aluminum

Seven new pieces—6 and 10 in. skillets, 1, 2 and 3 qt. covered saucepans and a Dutch oven with cast trivet and lid interchangeable with the larger skillet—have been brought out in hammered cast aluminum of an unusual brightness obtained by wire brushing outside and grinding inside. Re-designing of combination chicken fryer in Silverlite ware has made it lighter in weight and more convenient. The handle is shaped to fingers and palm, and the upper skillet is easily lifted and stays up as long as desired. Also serves as ordinary skillet, deep skillet, deep fat fryer and Dutch oven. Sells at $7.98. Wagner Mfg. Co., Sidney, Ohio.

Household Water Conditioner

A water normalizer that even improves upon rain water is a new product in crystal form called "Calgon." Its two principal uses are to prevent soap film, and to condition the water to help the soap do a more efficient job. Said to be 500 times less alkaline than the ordinary water softener and is not only harmless but good for the skin. Has been used very successfully for shampoo. Among the more important household uses are the wash bowl laundry, bath, toilet uses, dishes, family laundry and for woodwork. Prevents bath tub ring. Sold in two sizes, the 1-ounce can retails for 50 cents, and a 2½ pound can for $1.00. Calgon, Inc., Pittsburgh, Pa.

Oilcloth Ensemble

Called the "Big Apple," this new oilcloth ensemble design comes in table oilcloth, shelving, edging, scarfs, deluxe chair pads, cushioned asbestos pads, pot holder sets and satin damask (flannel back) table cloths. Available in chrome-tones, pastel grounds of green or blue. The Weiss & Klau Co., 462 Broadway, N. Y. C.

De Luxe Skillet

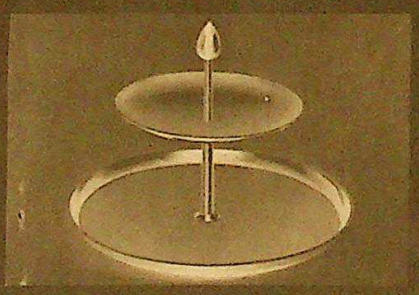
Made of triple-thick aluminum, this de luxe skillet is said to quickly absorb and hold an even steady heat for pan-broiling, frying, braising and for making smooth gravies and sauces. "Flavo-seal" cover retains the natural moisture. Handle will not shrink or turn in the hand or socket. Will not char or burn. Straight sides allow a maximum capacity with a minimum amount of space. West Bend Aluminum Co., West Bend, Wis.

Garden Tools

New line of garden tools includes cultivator with weeder, a garden cultivator, a "culti-weeder", a roller-rake, a "pull hoe" weeder, a turf edger, and a steel and hand broom. Cultivators have patented diamond point shares. The rake part of the roller-rake covers the seeded rows. By turning the tool over, roller comes into action, pressing the soil down so that the seed has closer contact with it. Gardex, Inc., Michigan City, Ind.

Double Decker Hostess Tray

Made of chrome with a tiny knob of polished grain walnut, this "Double Decker Hostess Tray" has a lower tray of 9 in. diameter. A single rod of polished chrome rising from the center supports a dainty second tray of 5¼ in. diameter. Raised outside rims. Walnut handle. "Evercraft Tiffin Toast Rack" is only 8 in. long and less than 3 in. deep. Will hold from 12-14 regular sized pieces of toast. Brushed chrome exterior, polished interior. Chains at either end keep the toast neatly in place. The Everyedy Co., Frederick, Md.



Courtesy The Everedy Co.

Stainless Steel Coffee Makers

A four-cup stainless steel percolator for making a small quantity of beverage, and a drip coffee maker with lower pot capacity of 8 cups, are two new coffee makers of Carlton Ware. The handle and knob on the drip coffee maker are of walnut wood. Background colors of hand painted pantry ware items are the accepted standardized colors, with the blue, a royal blue. Several new decorations, which are all hand painted, have been added, and among the most popular are Basket, Trellis and Poppy. For a more comfortable grip, a new Bakelite handle has been moulded on to the regular line of stainless steel kitchen spoons. Made in 11, 13 and 15 in. sizes, in plain or slotted bowls. Carrollton Metal Products Co., Carrollton, O.

Griddle Grill

"Spring Values" items include a new "Griddle Grille" which has a perfectly flat bottom specially designed for the latest type of closed-top ranges—retails for $1.59. A handy 3-piece self-measuring 1½, 2 and 3 qt. covered pan set at $2.69, an 8 cup self-measuring percolator with a cool bakelite handle at $1.69 and a new multi-purpose "Roast n' Broil n' Bake Pan" that can be used for broiling, roasting and baking at $1.29. Featured is a "Mirro" 21 ounce (⅝ qt.) "Windsor" sauce pan to retail for 21 cents . . . less than half of the regular price of 45 cents. Provided with graduations to facilitate measuring, tapering sides for easy cleaning, and a quick-heat bottom. Aluminum Goods Mfg. Co., Manitowoc, Wis.

Steam Pressure Cooker

Now made in 7 qt. size, this "All-American Master" pressure cooker prepares a complete meal at one time over one low flame. Seals in flavor with no loss or shrinkage. Made of rust-proof, solid molded aluminum with new cool, black bakelite fittings for convenient handling. Manufacturer states that flavors of food prepared in the cooker do not mix. Wisconsin Aluminum Foundry Co., Manitowac, Wis.

Combination Utensils

Six combinations through the interchange of the parts are possible with this combination utensil—three-cup egg poacher, a double boiler, covered casserole, pudding pan, sauce pan and covered sauce pan. A similar item with four daily uses is the combination egg poacher and fry pan. An inset with three egg cups provides an egg poacher, a stew pan for the slow cooking of meats and fowl, a fry pan and the often needed extra cover for other utensils. The 18 gauge fry pan places this item within the shopper's sense of durable ware. Enterprise Aluminum Co., Massillon, O.

9-15-1884 AD #12,411
GREAT BRITAIN

A.D. 1884.—N° 12,411.

Complete Specification.

An Improved Egg Cooker.

COMPLETE SPECIFICATION.

I, CHARLES WHITFIELD of Kettering, in the county of Northampton Engineer do hereby declare the nature of my invention for AN IMPROVED EGG COOKER and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement, reference being had to the accompanying sheet of drawing and to the letters of reference marked thereon :—

My improvement consists in the construction of a vessel or pan A of any suitable material size and shape in or near the bottom of which I form a small apperture or capillary conduit *x*. In this vessel the eggs are placed and boiling water poured over them either to fill the vessel or partly so according to the kind or number of eggs contained therein—The size of the apperture or conduit and the quantity of water used are so regulated or proportioned that the water will run out in a given time and leave the eggs uniformely cooked in a digestible condition The proportions I usually adopt being half a pint of water to one egg and the size of the apperture such as will allow the water to escape in ten minutes. The action of the apparatus being automatic there is no liability of spoiling the eggs by over cooking. The perforated vessel may be suspended over or held in an outer vessel B to catch the waste water—I protect the apperture, *x*, from becoming choked, by a covering or shield of fine gauze or other suitable material—Fig I is an elevation. II is a section.

Having now particularly described the nature of my said invention and in what manner the same is to be performed I declare that what I claim is

A perforated vessel for cooking eggs substantially as hereinbefore described.

Dated this 13th day of June 1885.

An Improved Egg Cooker.

PROVISIONAL SPECIFICATION.

I CHARLES WHITFIELD of Kettering in the County of Northampton Engineer do hereby declare the nature of my Invention for "AN IMPROVED EGG COOKER" to be as follows:—

My improvement consists in the construction of a vessel or pan of any suitable material size and shape in or near the bottom of which I form a small apperture or capillary conduit. In this vessel the eggs are placed & boiling water poured over them either to fill the vessel or partly so according to the kind or number of eggs contained therein The size of the apperture or conduit and the quantity of water used are so regulated or proportioned that the water will run out in a given time and leave the eggs uniformly cooked in a digestible condition The action of the apperatus being automatic there is no liability of spoiling the eggs by over cooking The perforated vessel may be suspended over or held in an outer vessel to catch the waste water.

15th September 1884.

CHAS. WHITFIELD.
